

A GAL CAN DREAM

“If the next 12 months prove as fruitful as the last, since GLEE 2011, we can safely say SEER Rockdust and SOIL REMINERALISATION is recognised and launched.” states Business Development Director, Jennifer Brodie.

Jennifer launched SEER Rockdust at GLEE 2007. She has been promoting this mineral rich, organically approved SOIL and COMPOST IMPROVER, straight from a Scottish quarry untreated apart from being freshly crushed and finely ground, ever since. The new 450g cartons, for house plants, tubs, window boxes plus home wormeries and composters list the extraordinary range of minerals and trace elements.

Since GLEE 2011, 450g cartons, 20kg and 1 tonne bags have been exported to SLOVENIA, HOLLAND, SWEDEN and DENMARK & fliers translated into each language. **B & Q** included it in their **verve** range and ALLOTMENTS growers continue to rave about it.

Each autumn brings in testimonials: <http://www.binnsoilnutrients.com/testimonials> with REGATTA LANE ALLOTMENTS proclaiming 8 veggie benefits, a PROFESSIONAL LANDSCAPE GARDENER singing its praises, MAJORCA achieving success all coming in this month. Formal trials have been started with OIL SEED RAPE where Binn Soil Nutrients is working with James Hutton Institute, Scotland's leading soil experts.

“When I really need something I ask the Universe.” states Jennifer. *“What we need right now is **A GOOD DOCUMENTARY ON MAINSTREAM TV to tell the full SEER Rockdust story.** By putting nature's own minerals back into the soil, from whence they came, we boost the soil's neglected micro fauna and so improve yeild, making plants less pesticide and chemical fertiliser dependant, our diets more mineral rich and less chemically loaded. A side effect of this is that we help to stabilise climate change by putting greenhouse gases back into the soil, from whence they came. It is so simple, and so important. Yes, a gal can dream.”*
